Due to electrical control panel upgrade, the pump hour recorders were disconnected and replaced with new recorders on 2/9/2016, therefore, no data is available for pump hours during this time.

NOTE: Daily pump hours derived from PMAC data flow times

NOTE: Daily Total volumes calculated from manual weekly physical meter reads

NOTE: Max Daily l/s FLOW calculated from manual weekly reads, averaged to give daily volumes then divided to give average daily flow

NOTE: A switchboard upgrade resulted in data not being reported automatically and therefore the following data has been determined. The new switchboard became operational in June 2017, and automatic reporting has resumed.

NOTE: Green figures refer to pump hours that have been determined using half hour electricity usage readings

NOTE: Orange figures refer to the maximum flow rate that has been calculated when Matipo pump 5 and Utuhina pump 1 are running simultaneously.

NOTE: Purple figures refer to total daily volumes that have been determined using manual weekly water meter reads.

NOTE: Blue figures refer to total daily volumes that have been calculated using estimated pump hours and pump flow rates, and volume (V=Ft), where F=pump

NOTES:
Green figures show: Original reported values incorrect due to an error with the automatic reporting script function, so back-up DATRAN data used.
New magflow meter transmitter installed at the headworks. Pulse output is different which means the automatic reported daily total is incorrect. The flow and pump hour data is correct and is used to calculate the daily total.
Original reported values were incorrect due an error with the automatic reporting script function, so back-up DATRAN data is used. Increased flows occurred on these days due to 3 pumps running simultaneously after power shut downs (as noted in transgressions table below). As noted, RLC is currently liaising with

Transgressions					
DATE	LIMIT	EXCEEDENCE	AMOUNT EXCEEDED	DURATION	REASON
21/11/17	Max Daily l/s 420.90 l/s	436.60	15.70	1 min	Exceedance occurred at the time of pump start up due to a power outage (3 pumps ran simultaneously upon start up)
23/11/17		431.20	10.30	1 min	
30/05/18		35.20	14.30	15 mins	
31/05/18		430.00	9.10	27 mins	High flows are a result of the plant shutting down during peak power usage (shut downs are for 30 mins and are undertaken by the power company). As a result, reservoir levels drop. When power is reinstated, high flows occur due to three pumps running simultaneously. RLC is currently liaising with contractor to reduce pump flows when 3 pumps are running simultaneously.

Transgressions

DATE	AMOUNT	DURATION	REASON
10/09/13	150/s	<1 minute	Power outage causes PLC reset resulting in a max reading of 150 before it resets - Actual max
27/06/13	113.5/s	<1 minute	Power spike causing incorrect reading - Actual max from back up data recorded as 100.55
11/06/13	125.6/s	<1 minute	Power spike causing incorrect reading - Actual max from back up data recorded as 101.33
5/10/15	3.2 /s	<1 min	An instantaneous spike on start-up following pump shutdown due to a power failure.

Green figures denote data obtained from back-up PMAC data. This is due to noise interference from VSD (harmonics) that caused incorrect reporting of daily total (m3) data on DATRAN Reports.

Purple figures denote m3 per day calculated from the daily max (l/s) and daily pumping hours. This is due to noise interference from VSD (harmonics) that caused incorrect reporting of daily total (m3) data on DATRAN Reports and where no PMAC back-up data is available.

Highlighted daily totals (m3) have been affected by noise interference from VSD (harmonics). This affects the programmable logic controller which has resulted in incorrect reporting of the daily total data on DATRAN reports, and no PMAC back-up data is available. Daily totals have been calculated (purple figures) or

NOTE: Purple figures denote m3 per day calculated from instantaneous flow (l/s) in one minute intervals and daily pumping.

NOTE: Blue figures denote readings taken from a new mechanical meter that was installed in May 2017. The new mechanical meter is installed at the source and will be used for all future consent returns. This will eliminate any future harmonic interference.

NOTE: RLC currently not taking water from Memo Spring (Consent 65756)
NOTE: No DATRAN data or PMAC data available (or is unreliable due to meter being knocked), so Red Stag data is used. Meter head may have been knocked, in turn, not allowing recording. Therefore Red Stag magflow readings are used. Daily averages (Total flow (m3)/86.4 = daily average (l/s)) for this data have been calculated from the total daily flows supplied by Red Stag. Red Stag data for this period is within their normal operating range, and RLC currently does not take any water, therefore the calculated averages will not underestimate the actual take.
