

# Sustainability Corner

## Sustainable play

Yearn to learn about climate change?  
Put off by complicated scientific reports and doomsday propaganda?  
Wondering how to get the family onboard in an interesting and challenging way?  
Chameleon Island Games might just be the experience you are waiting for.  
This Rotorua-based company has released games on carbon and energy efficiency. The seven games have varying levels of complexity and suit ages from 5 years to adult.  
Topics covered include energy rating systems, carbon tax, subsidies in the energy sector and emissions trading.  
There are two board options: Cards, and Chameleon Island. Sold in pairs or as a complete set, they make excellent birthday or Christmas presents. Check out the opening specials.  
To learn more, go to [www.chameleonisland.co.nz](http://www.chameleonisland.co.nz) or check them out at The Redwoods Gift Shop or Tutanekai Souvenirs.  
The website also has a blog for those who want to engage in some serious climate change debate!

Note: Sustainability Corner supports this commercial initiative because it is a local product that requires no energy, encourages family cohesion, and is educational. It is both sustainable and resilient.

Thanks to RDC Policy Planner, Ian McLean, for contributing this week's Sustainability Corner item.
